|                     |   |                 |   |
| <b>Bio</b>          | <p>Dr. Shahrzad Ansari is a senior gynecologist specializing in infertility, advanced hysteroscopy, and laparoscopy from Tehran / Iran. Her dedication to advancing the field of gynecology is reflected in her extensive contributions to national medical literature, including numerous publications in the prestigious Today Journal of Gynecology. Additionally, she serves as the editor of reference books in gynecology, further solidifying her authority in the field.</p> <p>Dr. Ansari's expertise lies in infertility treatment and advanced hysteroscopic surgery, with a particular focus on the innovative use of hysteroscopic morcellators. Her pioneering work in this area has led to significant advancements in gynecological procedures.</p> <p>On a global scale, Dr. Ansari has organized and led numerous hysteroscopy workshops, sharing her expertise with peers worldwide. She has also performed live surgeries at high-profile events such as the European Society for Gynaecological Endoscopy (ESGE) Congress and other international conferences. Through these contributions, she has played a pivotal role in enhancing gynecological care and advancing minimally invasive surgical techniques on an international platform.</p> |                 |   |

**Abstract**

The Bigatti Shaver is a fully mechanical, versatile instrument designed for a wide range of hysteroscopic procedures, including polypectomy and removal of intrauterine remnants. It is available in three sizes: 24 Fr, 19 Fr, and the latest 15 Fr, which is optimized for outpatient settings. The 15 Fr version allows for minimally invasive procedures without the need for cervical dilation, improving patient comfort and recovery time. Its purely mechanical operation eliminates the need for high-pressure fluid management systems, making it ideal for office-based hysteroscopy. The Bigatti Shaver enhances precision, reduces procedure time, and improves visualization, offering an efficient and patient-friendly solution for gynecological interventions.
